Just Transition:

Integrating Climate, Energy and Environmental Justice

Just transition is a new framework of analysis that brings together climate, energy and environmental justice scholarships. It was originally coined as a term that was designed to link the promotion of clean technology with the assurance of green jobs. The Paris climate change agreement marks a global acceptance that a more rapid transition is needed to avert disastrous consequences. In response, climate, energy and environmental justice scholarships must unite in assessing where injustices will emerge and how they should be tackled. Just transition offers a new space for developing an interdisciplinary transition sensitive approach to exploring and promoting (1) distributional, (2) procedural and (3) restorative justice, termed here as a new triumvirate of tenets.

Keywords: Just transition; environmental justice; climate justice; energy justice; distributional justice; procedural justice; restorative justice

1. Introduction

The term “just transition¹” was originally proposed by global trade unions in the 1980s. It became a mobilising term for promoting green jobs as a necessary component of the transition away from fossil

fuels { ADDIN EN.CITE

<EndNote><Cite><Author>Abraham</Author><Year>2017</Year><RecNum>1135</RecNum><DisplayText>(Abraham, 2017)</DisplayText><record><rec-number>1135</rec-number><foreign-keys><key

¹ Please note that we concentrate on this specific understudied term, rather than the more overused incarnations of transition-based research such as socio-technical systems (STS).

app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1503553564">1135</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Abraham, Judson</author></authors></contributors><titles><title>Just Transitions for the Miners: Labor Environmentalism in the Ruhr and Appalachian Coalfields</title><secondary-title>New Political Science</secondary-title></titles><periodical><full-title>New Political Science</full-title></periodical><pages>218</pages><volume>39</volume><number>2</number><keywords><keyword>ENVIRONMENTAL law -- Economic aspects</keyword><keyword>ENERGY industries & the environment</keyword><keyword>EARLY retirement</keyword><keyword>COAL miners -- Economic conditions</keyword><keyword>CORPORATE state</keyword><keyword>UNITED Mine Workers of America</keyword></keywords><dates><year>2017</year><pub-dates><date>06//</date></pub-dates></dates><isbn>07393148</isbn><urls><related-urls><url>http://search.ebscohost.com/login.aspx?direct=true&db=edb&AN=122541898&site=eds-live</url></related-urls></urls><remote-database-name>edb</remote-database-name><remote-database-provider>EBSCOhost</remote-database-provider></record></Cite></EndNote>}. From this perspective, the move away from fossil fuels entailed the wholesale shutdown of multiple associated industries. The development of new energy industries offered the potential for green jobs. The jobs argument was placed at the center of the just transitions concept. Criticisms have emerged against this term as it can lead to a 'jobs versus environment or climate' frame, which can be used detrimentally against communities and the transition. We agree with

{ ADDIN EN.CITE <EndNote><Cite AuthorYear="1"><Author>Healy</Author><Year>2017</Year><RecNum>1019</RecNum><DisplayText>Healy and Barry (2017)</DisplayText><record><rec-number>1019</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1500621144">1019</key><key

It could result in greater state intervention to ensure green jobs or present a labour-based incentive for speeding up decarbonisation

policies { ADDIN EN.CITE

<EndNote><Cite><Author>Altintzis</Author><Year>2014</Year><RecNum>1132</RecNum><DisplayText>(Altintzis and Busser, 2014)</DisplayText><record><rec-number>1132</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1503553564">1132</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Altintzis, Georgios</author><author>Busser, Esther</author></authors></contributors><titles><title>The lessons from trade agreements for just transition policies</title><secondary-title>International Journal of Labour Research</secondary-title></titles><periodical><full-title>International Journal of Labour Research</full-title></periodical><pages>269</pages><volume>6</volume><number>2</number><keywords><keyword>COMMERCIAL treaties</keyword><keyword>AIR pollution monitoring</keyword><keyword>EMISSION control</keyword><keyword>EMISSIONS trading</keyword><keyword>AIR pollution prevention</keyword><keyword>climate change</keyword><keyword>employment security</keyword><keyword>environment</keyword><keyword>sustainable development</keyword><keyword>trade agreement</keyword><keyword>trade liberalization</keyword></keywords><dates><year>2014</year><pub-dates><date>12//</date></pub-dates></dates><isbn>20769806</isbn><urls><related-urls><url>http://search.ebscohost.com/login.aspx?direct=true&db=edb&AN=103335417&site=eds-live</url></related-urls></urls><remote-database-name>edb</remote-database-name><remote-database-provider>EBSCOhost</remote-database-provider></record></Cite></EndNote>}. We argue, instead, that it could have the potential for uniting climate, energy and environmental (CEE) justice to provide a more comprehensive framework for analysing and ultimately promoting fairness and equity throughout the transition away from fossil fuels.

The urgent need to accelerate the transition could, and should, unite CEE justice scholarship { ADDIN EN.CITE

<EndNote><Cite><Author>Heffron</Author><Year>2018</Year><RecNum>1249</RecNum><DisplayText>(Heffron and McCauley, 2018)</DisplayText><record><rec-number>1249</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1512643310">1249</key><key app="ENWeb" db-id="">0</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Heffron, Raphael J.</author><author>McCauley, Darren</author></authors></contributors><titles><title>What is the 'Just Transition'?</title><secondary-title>Geoforum</secondary-title></titles><periodical><full-title>Geoforum</full-title></periodical><pages>74-77</pages><volume>88</volume><section>74</section><dates><year>2018</year></dates><isbn>00167185</isbn><urls></urls><electronic-resource-num>10.1016/j.geoforum.2017.11.016</electronic-resource-num></record></Cite></EndNote>}. In this way, we build upon just sustainabilities { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}

as a previous attempt to unite scholarships (in that case sustainability, environmental justice and equity). The trade union origins of the just transition concept were explicitly positioned within the environmental justice movement { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. Environmental justice literature is grappling with how to balance the social and environmental dimensions involved in this transition { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. Climate justice is most focused upon effective global justice transitions that can deal with the implications of the inevitable consequences of rapid climate change for vulnerable groups in the (not exclusively) Global South { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. Energy justice scholars incorporate the idea of transition both from the production viewpoint of moving towards low carbon sources { ADDIN EN.CITE { ADDIN EN.CITE.DATA }} as well as the consumption-based concerns of achieving energy efficiency in the long term without compromising individual well-being or community cohesion { ADDIN EN.CITE { ADDIN

EN.CITE.DATA }}. And yet, each justice scholarship suffers through the lack of a joint conceptual space for reflection. The transition involves an inherently intersectoral dimension involving all three prominent justice scholarships. The urgency of the transition must be met with a similar thrust for justice scholars in developing new consolidated frameworks of analysis to provide sustainable long-term solutions.

We identify the two dominant frames of analysis used by all three justice scholarships to be (1) *distributional* and (2) *procedural justice*. The coverage of inequalities associated with the transition are frequently determined by distributional or procedural understandings. It is time for each area of scholarship to more explicitly engage in contesting and developing our thinking in both areas within the context of a just transition. Environmental justice has reminded us that proximity continues to be an important consideration with regards to the injustices experienced by individuals or communities { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. Scholarship in this area, combined with new thinking in climate and energy justice scholarship, have challenged researchers to think beyond proximity { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. All three have experienced the same analytical turn away from quantitative distributional, and especially proximity-based, studies towards more qualitative procedural based research { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}.

<EndNote><Cite><Author>McCauley</Author><Year>2018</Year><RecNum>1042</RecNum><DisplayText>(McCauley, 2018c)</DisplayText><record><rec-number>1042</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1500628741">1042</key></foreign-keys><ref-type name="Book">6</ref-type><contributors><authors><author>McCauley, D.</author></authors></contributors><titles><title>Energy Justice: Re-Balancing the Trilemma of Security, Poverty and Climate Change</title></titles><dates><year>2018</year></dates><pub-location>Basingstoke</pub-location><publisher>Palgrave</publisher><isbn>ISBN 978-3-319-62494-5</isbn><urls></urls><electronic-resource-num>10.1007/978-3-319-62494-5</electronic-resource-

num></record></Cite></EndNote>}. This has equally led to innovations in all three justice scholarships. If we are to achieve a just transition, justice scholarship must come together to develop both dimensions. We also present a third dimension (completing our new triumvirate of tenets²) which is currently underdeveloped, namely (3) *restorative justice*. We argue that all three areas of scholarship should engage with thought in this area. Just transition can offer this space for such an engagement.

2. Why do we need a just transition?

We are now living in a 400 ppm (parts per million) world with levels unlikely to drop below this symbolic milestone in our lifetime { ADDIN EN.CITE <EndNote><Cite><Author>WB</Author><Year>2017</Year><RecNum>725</RecNum><DisplayText>(W B, 2017a; WB, 2017b)</DisplayText><record><rec-number>725</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1492079714">725</key></foreign-keys><ref-type name="Report">27</ref-type><contributors><authors><author>WB</author></authors></contributors><titles><title>CO2 emissions (metric tons per capita) | Data</title><short-title>CO2 emissions (metric tons per capita) | Data</short-title></titles><keywords><keyword>of

² We refer to this triumvirate of tenets as 'new' as the original usage of this term came in { ADDIN EN.CITE <EndNote><Cite><Author>McCauley</Author><Year>2013</Year><RecNum>399</RecNum><DisplayText>McCauley D, Heffron R, Stephan H, et al. which is slowly beginning to be responded to with a plethora of new case studies { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}.

A key injustice in energy is the over-reliance of today's global societies on the historically embedded production systems of fossil fuels to satisfy growing energy demands. According to the International Energy Agency { ADDIN EN.CITE

<EndNote><Cite><Author>IEA</Author><Year>2016</Year><RecNum>427</RecNum><DisplayText>(IEA, 2016)</DisplayText><record><rec-number>427</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1489359798">427</key><key app="ENWeb" db-id="">0</key></foreign-keys><ref-type name="Report">27</ref-type><contributors><authors><author>IEA</author></authors><tertiary-authors><author>International Energy Agency</author></tertiary-authors></contributors><titles><title>World Energy Statistics 2016</title></titles><pages>1-786</pages><dates><year>2016</year></dates><pub-location>Paris</pub-location><urls></urls></record></Cite></EndNote>}, the world is producing over double output today

than in 1973. In both years and the interim period, fossil fuels heavily dominate the world's energy production. In 2016, oil, coal and gas amount to 86% of the worlds energy supply, experiencing only a small drop from 90% in 1973 { ADDIN EN.CITE

<EndNote><Cite><Author>McCauley</Author><Year>2018</Year><RecNum>1256</RecNum><DisplayText>(McCauley, 2018d)</DisplayText><record><rec-number>1256</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1513962881">1256</key></foreign-keys><ref-type name="Book Section">5</ref-type><contributors><authors><author>McCauley, D.</author></authors><secondary-authors><author>McCauley, D.</author></secondary-authors></contributors><titles><title>Global Energy Justice: Tackling Systems of Inequality in Energy Production and Consumption</title><secondary-

title>Energy Justice</secondary-title></titles><pages>1-26</pages><dates><year>2018</year></dates><publisher>Springer</publisher><isbn>978-3-319-62493-8</isbn><urls></urls><electronic-resource-num>DOI 10.1007/978-3-319-62494-5_1</electronic-resource-num></record></Cite></EndNote>}. The just transition is needed to capture the ‘just’ process when societies move towards an economy free of CO2 emissions. Justice is an important element to the transition. Often the rhetoric of governments, companies, institutions and researchers discuss ‘a transition to low carbon economy’ and then there is no mention of ‘just’.

Transitioning away from fossil fuels in the global context presented above, however, is proving to be very difficult and slow. For example, in 2016, fossil fuels accounted for 81.5% of the UK’s primary energy needs, down only half a percent from 2015 { ADDIN EN.CITE <EndNote><Cite><Author>Brief</Author><Year>2017</Year><RecNum>1251</RecNum><Prefix>Carbon </Prefix><DisplayText>(Carbon Brief, 2017)</DisplayText><record><rec-number>1251</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1513960921">1251</key></foreign-keys><ref-type name="Web Page">12</ref-type><contributors><authors><author>Carbon Brief</author></authors></contributors><titles><title>Six charts show UK’s progress on low-carbon energy slowing down</title></titles><volume>2017</volume><number>1st August</number><dates><year>2017</year></dates><pub-location>London</pub-location><publisher>Carbon Brief</publisher><urls><related-urls><url>https://www.carbonbrief.org/six-charts-show-ukprogress-on-low-carbon-energy-slowing-down</url></related-urls></urls></record></Cite></EndNote>}. Consider other examples from the UK in relation to investment in energy infrastructure and also foreign aid: in 2016, £18.6 billion (10.3% of total investment in the UK) was invested, of which 34% was in oil and gas extraction, 54% in electricity, 11% in gas, with the remaining in coal extraction, and coke & refined petroleum products industries

(BIES and UKSA). Now while the amount of investment in electricity is not presented in more detail, considering most of the electricity sector (54%) is fossil fuels (BIES and UKSA), the majority of this investment is similarly in fossil fuels. Further, the continued support given to fossil fuels by the UK is exemplified by national foreign investment policy where through development aid, the UK supports by a ratio of nearly two to one, fossil fuel projects { ADDIN EN.CITE

<EndNote><Cite><Author>CAFOD</Author><Year>2017</Year><RecNum>1252</RecNum><DisplayText>(CAFOD, 2017)</DisplayText><record><rec-number>1252</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1513961377">1252</key></foreign-keys><ref-type name="Web Page">12</ref-type><contributors><authors><author>CAFOD</author></authors></contributors><titles><title>UK Support for Energy in Developing Countries</title></titles><dates><year>2017</year></dates><pub-location>London</pub-location><publisher>CAFOD</publisher><urls><related-urls><url><https://cafod.org.uk/content/download/27353/269740/version/2/file/Policy%20briefing%20UK%20Support%20for%20Energy%20in%20Developing%20Countries%20Oct%202015.pdf></url></related-urls></urls></record></Cite></EndNote>}.

Globally, there is a need to recognize that change is needed. For example, seven climate records were broken last year in 2016: melting of Arctic ice; consecutive hottest months; hottest day in India ever; highest temperature in Alaska; consecutive and biggest annual increase in CO2; hottest Autumn in Australia ever; and highest amount of destruction in Australia’s Great Barrier Reef { ADDIN EN.CITE

<EndNote><Cite><Author>Guardian</Author><Year>2016</Year><RecNum>1253</RecNum><DisplayText>(Guardian, 2016)</DisplayText><record><rec-number>1253</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1513961512">1253</key></foreign-keys><ref-type name="Web Page">12</ref-type><contributors><authors><author>The

Guardian</author></authors></contributors><titles><title>Seven climate records set so far in 2016.</title></titles><volume>2016</volume><number>30th October</number><dates><year>2016</year></dates><pub-location>London</pub-location><publisher>The Guardian</publisher><urls><related-urls><url>https://www.theguardian.com/environment/2016/jun/17/seven-climate-records-set-so-far-in-2016</url></related-urls></urls></record></Cite></EndNote>}. Further, coal plant construction is on the increase, particularly, in many developing countries. Indeed, there is quite simply too much fossil fuels in the global energy system. Hence, at an international level, it should be acknowledged that the transition needs to happen at an accelerated pace, while its slowness, however, is the norm { ADDIN EN.CITE <EndNote><Cite><Author>Figueres</Author><Year>2017</Year><RecNum>1254</RecNum><DisplayText>(Figueres et al., 2017)</DisplayText><record><rec-number>1254</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1513961700">1254</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Figueres, C.</author><author>Schelinhuber, H.</author><author>Whiteman, G.</author><author>Rockstrom, J.</author><author>Hobley, A.</author><author>Rahmstorf, S.</author></authors></contributors><titles><title>Three years to safeguard our climate</title><secondary-title>Nature</secondary-title></titles><periodical><full-title>Nature</full-title></periodical><pages>593-595</pages><volume>546</volume><number>7660</number><dates><year>2017</year></dates><urls></urls></record></Cite></EndNote>}.</p></div>

economics has not yet delivered positive ‘just’ outcomes for society. This neoliberal viewpoint and its botched drive for competition have led to the current *malaise* of many sectors in the economy. It has created an oligopolistic market where usually the market share of the leading three to six firms is greater than 90 *per cent*, including electricity retail and banking retail. Such markets have become almost too big to fail, as illustrated by the public transfer of £60 billion annually to the top-five banks in the UK in subsidies over the financial crisis period of 2007-2009 { ADDIN EN.CITE <EndNote><Cite><Author>Heffron</Author><Year>2015</Year><RecNum>409</RecNum><DisplayText>(Heffron et al., 2015)</DisplayText><record><rec-number>409</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5stqvvv9zwx9z59z" timestamp="1489359724">409</key><key app="ENWeb" db-id="">0</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Heffron, Raphael J.</author><author>McCauley, Darren</author><author>Sovacool, Benjamin K.</author></authors></contributors><titles><title>Resolving society’s energy trilemma through the Energy Justice Metric</title><secondary-title>Energy Policy</secondary-title></titles><periodical><full-title>Energy Policy</full-title></periodical><pages>168-176</pages><volume>87</volume><dates><year>2015</year></dates><isbn>03014215</isbn><urls><related-urls><url><http://www.sciencedirect.com/science/article/pii/S030142151530077X></url></related-urls></urls><electronic-resource-num>10.1016/j.enpol.2015.08.033</electronic-resource-num></record></Cite></EndNote>}. Still, the philosophical underpinnings of mainstream economic policy have not advanced. If anything, it has significantly added to societal inequality; and in terms of traditional economics, it is held here that a neoliberalist stance on the neo-classical school of thought still dominates economic policy-making and this echoes with research done in the fossil fuel community

{ ADDIN EN.CITE

<EndNote><Cite><Author>Rist</Author><Year>2016</Year><RecNum>1255</RecNum><DisplayText>(Rist, 2016)</DisplayText><record><rec-number>1255</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5stqvvv9zwx9z59z" timestamp="1513961801">1255</key></foreign-keys><ref-type name="Book">6</ref-type><contributors><authors><author>Rist, G.</author></authors></contributors><titles><title>The History of Development: From Western Origins to Global Faith</title></titles><dates><year>2016</year></dates><pub-location>London</pub-location><publisher>Zed Publishers</publisher><urls></urls></record></Cite></EndNote>.

Meaningful reform continues to escape global societies. The failure to reform the financial system post-crisis of 2007–2009 demonstrates, for example, the willingness of societies to accept ongoing policy failure. Clear parallels of what society will accept is evident in the ongoing failures of climate, energy and environmental policies; for example, international debate and changing rhetoric where the energy source ‘gas’ is now classed as a ‘cleaner fuel’ or even ‘transition fuel’, and a lower-carbon energy source { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. Within this context, research, policy and activist communities within CEE scholars often treat their concepts as separate constructs despite the uniting shared goal of a low- or post-carbon economy. Urgent work is needed to provide a unified perspective on justice scholarship in the three areas of justice scholarship, and it is through the just transition concept that this can be achieved.

3. What is the just transition?

The just transition is defined here as ‘a fair and equitable process of moving towards a post-carbon society’. This process must seek fairness and equity with regards to the major global justice concerns such as (but not limited to) ethnicity, income, gender within both developed and developing contexts. By its very nature, this transition must take place at a global scale, whilst connecting effectively with

multi-scalar realities. It involves the development of principles, tools and agreements that ensure both a fair and equitable transition for all individuals and communities. We currently live in a world which is dominated by fossil fuels, amounting to 82% of the world's energy supply { ADDIN EN.CITE <EndNote><Cite><Author>IEA</Author><Year>2016</Year><RecNum>427</RecNum><DisplayText>(IEA, 2016)</DisplayText><record><rec-number>427</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqv9zwx9z59z" timestamp="1489359798">427</key><key app="ENWeb" db-id="">0</key></foreign-keys><ref-type name="Report">27</ref-type><contributors><authors><author>IEA</author></authors><tertiary-authors><author>International Energy Agency</author></tertiary-authors></contributors><titles><title>World Energy Statistics 2016</title></titles><pages>1-786</pages><dates><year>2016</year></dates><pub-location>Paris</pub-location><urls></urls></record></Cite></EndNote>}. It has only experienced a small drop from 90% in 1973. The Paris climate change agreement marked a drastic step away from a carbon-based world. This change will not happen overnight. Most projections suggest that fossil fuels will continue to dominate, in the most optimistic view, until 2035 { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. Added to this, rates of consumption are expected to increase by around 25% to 34% globally in the next twenty years, with the world's population reaching 8.8 billion { ADDIN EN.CITE <EndNote><Cite><Author>BP</Author><Year>2017</Year><RecNum>572</RecNum><DisplayText>(BP, 2017)</DisplayText><record><rec-number>572</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqv9zwx9z59z" timestamp="1490252249">572</key></foreign-keys><ref-type name="Report">27</ref-type><contributors><authors><author>BP</author></authors><tertiary-authors><author>British Petroleum</author></tertiary-authors></contributors><titles><title>Energy Outlook: 2017 edition</title></titles><dates><year>2017</year></dates><pub-location>London</pub-

location><urls></urls></record></Cite></EndNote>}. Throughout the foreseeable future, the world will gradually move away from fossil fuels.

The urgency of carbon reduction necessitates a united conceptual approach to guarantee justice throughout this transition. The concept of just transition is not new (as explored above). Within a climate justice context, the broad frame of transitioning in a fair and equitable manner has been used to shed light on major future challenges facing the Global South in areas such as the Caribbean { ADDIN EN.CITE

</EndNote></Cite></EndNote>}

Whilst just transition originating from the trade union movement is historically connected with environmental justice, it is frequently overlooked by leading scholars { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. The use of just transition in environmental justice literature, when it has been used, has concentrated on the various successes and failures of the “green” (i.e environment only) and “brown” (i.e. jobs and public health) frames for mobilising opposition to energy infrastructures { ADDIN EN.CITE

urls></urls><electronic-resource-num>10.1016/j.enpol.2016.05.003</electronic-resource-num><language>English</language></record></Cite></EndNote>} demonstrate that the green approach towards environmental justice hindered the transition away from coal mining in New South Wales, Australia. The adoption of a singular focus in environmental justice on the ecological impacts of coal mining was found to hold back the success of civil society campaigns. The paper assesses two such campaigns that were designed to resist the regional hegemony of fossil fuel interests. The battle between jobs and environment created division between community and labour movement interests. The just transition frame of combining both an environmental and jobs focus is identified as a potential turning point.

Just transition has more to offer than what is currently realized in its usage by CEE justice scholars. We argue that its analytical reach must continue to embrace but also move beyond the simplicity of its origins, which focus on promoting a jobs-based solution to the transition to a post carbon society. We of course acknowledge the importance of the job argument, as well as the broader inevitable cost allocation that the transition entails (e.g. electric vehicles, smart devices etc.). It can nevertheless offer a space to bring together the three major justice scholarships. The inequality today for individuals and communities in both the Global South and Global North will transform dramatically in unison with the transition away from fossil fuels. Rather than depending upon how the term just transition is currently used, we suggest that it should be a new analytical framework that brings together state-of-the-art thinking in (i) distributive, (ii) procedural and (iii) restorative justice. We identified these three dimensions as central to CEE justice scholarship to date and in the future – with the third on restorative justice being the least explored to date. By bringing them together, we can better assess the challenge of transition, cutting across the three key sectors of environment, climate and energy.

4. A comprehensive approach towards *distributional justice*

Environmental justice has provided a wide range of studies in this area based upon exploring proximity as a central concept { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. { ADDIN EN.CITE <EndNote><Cite AuthorYear="1"><Author>McKenzie</Author><Year>2016</Year><RecNum>456</RecNum><DisplayText>McKenzie et al. resource-num></record></Cite></EndNote>} who both argue that there is an urgent need to explore injustices that take place outside the analytical framework of proximity – a call reinforced in more recent work { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}.

This analytical turn emerged from frustration with the dominance of quantitative studies in exploring the proximity issue by largely US scholars. It has, partly, resulted in a focus upon the qualitative (though not exclusively of course) dimensions of injustice often reflected in procedural studies (as explored below) as well as in new distributional frameworks in the form of (a) capabilities and well-being (b) risk and responsibility (c) vulnerability and (d) recognition. The concept of capability centered justice was developed by { ADDIN EN.CITE <EndNote><Cite AuthorYear="1"><Author>Sen</Author><Year>2011</Year><RecNum>682</RecNum><DisplayText>Sen (2011)</DisplayText><record><rec-number>682</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1491907502">682</key></foreign-keys><ref-type name="Book">6</ref-type><contributors><authors><author>Sen, A.</author></authors></contributors><titles><title>The Idea of Justice</title><short-title>The Idea of Justice</short-title></titles><pages>496</pages><dates><year>2011</year><pub-dates><date>2010-07-01</date></pub-dates></dates><pub-location>Harvard</pub-location><publisher>Harvard University Press</publisher><isbn>0141037857</isbn><urls><related-urls><url><https://www.amazon.co.uk/Idea-Justice-Amartya-Sen/dp/0141037857></url></related-urls></urls><remote-database-provider>www.amazon.com</remote-database-provider></record></Cite></EndNote>} and { ADDIN EN.CITE <EndNote><Cite AuthorYear="1"><Author>Nussbaum</Author><Year>2011</Year><RecNum>1384</RecNum><DisplayText>Nussbaum (2011)</DisplayText><record><rec-number>1384</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1522752927">1384</key></foreign-keys><ref-type name="Book">6</ref-

Whilst we observe such distributional research in environmental justice beyond proximity { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}, climate and energy justice scholarships have adopted more readily these new frameworks of distributional analysis.

Climate justice has allowed researchers to explicitly reflect upon the distribution of risks and responsibilities { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. Climate change involves what is referred to as “a double inequality” { ADDIN EN.CITE <EndNote><Cite><Author>Barrett</Author><Year>2013</Year><RecNum>1144</RecNum><Pages>1819</Pages><DisplayText>(Barrett, 2013: 1819)</DisplayText><record><rec-number>1144</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1503556892">1144</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Barrett, Sam</author></authors></contributors><titles><title>Local level climate justice? urls><url>http://search.ebscohost.com/login.aspx?direct=true&db=edselp&AN=S0959378013
 001210&site=eds-live</url></related-urls></urls><electronic-resource-
 num>10.1016/j.gloenvcha.2013.07.015</electronic-resource-num><remote-database-
 name>edselp</remote-database-name><remote-database-provider>EBSCOhost</remote-database-
 provider></record></Cite></EndNote>}, where the distribution of risk and responsibility are inverted.
 The Global North is responsible for the large part of the negative consequences associated with climate
 change but remain the least affected. Conversely, the Global South are less responsible for such
 consequences, but is set to experience the major consequences through impacts upon livelihoods,
 assets and security { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. Distributional injustices are therefore
 conceptually untied from proximity as a central concept. This allows us to explore more broadly the
 ways in which inequalities are distributed throughout the world, no longer bound to geographical
 proximity. The identification of where risks and responsibilities lie lends itself directly to exploring where
 the most vulnerable communities are and how they adapt.

Energy (as well as climate) justice contributes to research on vulnerabilities { ADDIN EN.CITE { ADDIN
 EN.CITE.DATA }}. Rather than focusing upon communities that are at the sharp end of climate change,
 energy justice research demonstrates where communities are vulnerable in terms of access or
 affordability { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. This has directly led to studies in energy poverty
 { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}, fuel poverty { ADDIN EN.CITE { ADDIN EN.CITE.DATA }} and
 energy vulnerabilities { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. It reminds us that injustices in the form
 of vulnerability can also exist outside the specific context of climate change. Climate and energy justice
 research has also developed from what has been termed as “the post distributional” { ADDIN EN.CITE

context of climate justice movements. Within an energy context, it is often associated with shedding
light on the misrecognition of marginalised groups such as ethnic minorities, disabled, elderly or
students { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. A just transition approach to distributional injustices
must therefore adopt the full range of approaches in exploring distributional inequalities which emerge
to different extents across CEE justice.

5. Uniting frameworks to achieve *procedural justice*

The transition away from fossil fuels will generate new senses of injustice surrounding processes of
community engagement and involvement. Procedural justice has concentrated around the siting of new
infrastructure within environmental justice literature { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}.
Distributional studies have demonstrated that a wide range of harmful infrastructure and more
generally perceived ‘bads’ has been located within areas of social deprivation or ethnic diversity { ADDIN
EN.CITE { ADDIN EN.CITE.DATA }}. This has resulted in protest movements designed to bring attention
towards this injustice { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. { ADDIN EN.CITE <EndNote><Cite

num><language>English</language></record></Cite></EndNote>} shows us that procedural

approaches in environmental justice are indeed often site specific but also based upon an awareness of local identity, as in their study of the construction of two dams in Portugal.

We still find similar locality specific case studies in climate and energy justice literature { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. They have, in addition, inspired the widening of what is understood to be procedural justice in four major ways through the development of (a) resilience and adaptation (b) from protest to acceptability (c) supply chain and whole systems (d) practices and behaviours. These offer procedural justice scholars a wider range of analytical frames for understanding the transition away from fossil fuels. Procedural justice within a resilience context is still focused upon sites and localities. The major difference here is that the engagement processes are designed specifically to allow communities to respond positively to major shocks instigated by climate change { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. The focus is less on reducing or avoiding conflict due to the construction of a given infrastructure. { ADDIN EN.CITE <EndNote><Cite

AuthorYear="1"><Author>Archer</Author><Year>2015</Year><RecNum>1109</RecNum><DisplayText>Archer and Dodman (2015)</DisplayText><record><rec-number>1109</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5stqvvv9zwx9z59z" timestamp="1501571574">1109</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Archer, Diane</author><author>Dodman, David</author></authors></contributors><titles><title>Making capacity building critical: Power and justice in building urban climate resilience in Indonesia and Thailand</title><secondary-title>Urban Climate</secondary-title></titles><periodical><full-title>Urban Climate</full-title></periodical><pages>68-78</pages><volume>14</volume><number>Part 1</number><dates><year>2015</year><pub-dates><date>12/1/December 2015</date></pub-dates></dates><publisher>Elsevier B.V.</publisher><isbn>2212-0955</isbn><accession-num>S2212095515300079</accession-num><work-type>Article</work-type><urls><related-urls><url>http://search.ebscohost.com/login.aspx?direct=true&db=edselp&AN=S2212095515300079&site=eds-live</url></related-urls></urls><electronic-resource-num>10.1016/j.uclim.2015.06.007</electronic-resource-num><remote-database-name>edselp</remote-database-name><remote-database-provider>EBSCOhost</remote-database-provider></record></Cite></EndNote>} examined the procedural elements of capacity building in Indonesia and Thailand where both case studies indicate that procedural based capacity building is necessary for developing knowledge and understanding of the technical aspects of climate change and responses to it.

A second extension of the procedural component of justice is evident in climate justice literature. The original approach set out by environmental justice literature as outlined above is often focused upon production-related activities and associated infrastructures. A key component of the transition to a post-carbon society is energy efficiency { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. The site of study, in

this sense, has moved away from large-scale industry and communities towards households where traditional practices are reimagined within a post-carbon society { ADDIN EN.CITE <EndNote><Cite><Author>Stern</Author><Year>2016</Year><RecNum>13</RecNum><DisplayText>(Stern et al., 2016)</DisplayText><record><rec-number>13</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1489354182">13</key><key app="ENWeb" db-id="">0</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Stern, Paul C.</author><author>Janda, Kathryn B.</author><author>Brown, Marilyn A.</author><author>Steg, Linda</author><author>Vine, Edward L.</author><author>Lutzenhiser, Loren</author></authors></contributors><titles><title>Opportunities and insights for reducing fossil fuel consumption by households and organizations</title><secondary-title>Nature Energy</secondary-title></titles><periodical><full-title>Nature Energy</full-title></periodical><pages>16043</pages><volume>1</volume><number>5</number><dates><year>2016</year></dates><isbn>2058-7546</isbn><urls><related-urls><url>http://www.nature.com/articles/nenergy201643.pdf</url></related-urls></urls><electronic-resource-num>10.1038/nenergy.2016.43</electronic-resource-num></record></Cite></EndNote>}.</p>

demonstrating the challenges involved in understanding the behaviours and practices of householders.
Externally driven engagement practices are replaced by self-initiated practices. A third extension of the
procedural concept emerges from energy justice literature. The focus on energy systems brings an
inherent multiplication of study sites considering the comprehensive nature of a national energy
systems. Procedural justice is reconceptualised as taking place in multiple locations, from mining to
waste { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}.

A fourth extension originates primarily in the energy justice focused literature. It equally
demonstrates that protest is not always the origin for procedural justice to take place. { ADDIN EN.CITE

Restoration as a concept has not been explored in sufficient detail by the three justice scholarships. There is, of course, an implicit dimension of procedural justice which includes restorative arguments. Meaningful engagement and inclusion of affected societies through procedural justice is designed to restore trust between the alleged perpetrator and affected communities. The lack of explicit critical analysis of restoration threatens the full transformative potential, which is often wrongly understood as an end in themselves, rather than the comprehensive restoration of senses of injustice.

Restorative justice predates the emergence of just transition as well as the three major justice scholarships explored in this paper. It arose as a central component in law, where intense questioning ensues after an injustice has occurred { ADDIN EN.CITE { ADDIN EN.CITE.DATA }}. Its primary aim is to repair the harm that has been done to an individual, rather than simply focusing upon punishing the offender. It can also help in identifying where prevention needs to occur. Within a legal context, it has been mainly applied in relation to criminal law, and in relation to corporate crime { ADDIN EN.CITE <EndNote><Cite><Author>Hamilton</Author><Year>2015</Year><RecNum>1172</RecNum><DisplayT

ext>(Hamilton, 2015)</DisplayText><record><rec-number>1172</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1503561779">1172</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Hamilton, M.</author></authors></contributors><auth-address>University of New South Wales</auth-address><titles><title>Restorative justice activity orders: Furthering restorative justice intervention in an environmental and planning law context?</title><secondary-title>Environmental and Planning Law Journal</secondary-title></titles><periodical><full-title>Environmental and Planning Law Journal</full-title></periodical><pages>548-561</pages><volume>32</volume><number>6</number><section>548</section><dates><year>2015</year><pub-dates><date>01 / 01 /</date></pub-dates></dates><publisher>Thomson Reuters (Professional) Australia Ltd</publisher><isbn>0813300X</isbn><accession-num>edselc.2-52.0-84955159485</accession-num><work-type>Article</work-type><urls><related-urls><url>http://search.ebscohost.com/login.aspx?direct=true&db=edselc&AN=edselc.2-52.0-84955159485&site=eds-live</url></related-urls></urls><remote-database-name>edselc</remote-database-name><remote-database-provider>EBSCOhost</remote-database-provider><language>English</language></record></Cite></EndNote>}. Within the context of the transition away from fossil fuels, it is not simply the loss of jobs from associated industries that will require restorative justice solutions. There are questions surrounding past damages that have already occurred, existing crimes perpetrated against not only individuals { ADDIN EN.CITE <EndNote><Cite><Author>Gibbs</Author><Year>2009</Year><RecNum>1178</RecNum><DisplayText>(Gibbs, 2009)</DisplayText><record><rec-number>1178</rec-number><foreign-keys><key app="EN" db-id="0a0sx5rd8xerzjez52s5tstqvvv9zwx9z59z" timestamp="1503590346">1178</key></foreign-keys><ref-type name="Journal Article">17</ref-type><contributors><authors><author>Gibbs,

7. Conclusion: towards a new triumvirate of tenets

The transition towards a post-carbon world means that justice scholarship must unite to develop comprehensive frameworks of analysis. The trade union movements in the 1980s could see that the world was in the process of a major transformation which involves serious consequences for society. The Paris climate change agreement marks a global acceptance that this transformation is due to speed up as the gravity of climate change becomes apparent. The concept of just transition must respond to this new reality. The impact will no longer restrict itself to the jobs losses in a handful of developed nations. It implicates individuals and communities throughout the world, both in the Global North and Global South. The impacts are also not restricted to society. This transition is reshaping our environment and global ecosystem, as well as the climate of the future.

A reframing of the just transition concept beyond its original strategic purpose can unite climate, energy and environmental justice scholarships. We argue that the reframing process of just transition should involve a comprehensive approach to the two most common dimensions of all three scholarships, namely distributional and procedural justice. Existing scholarship in these areas have

established a detailed understanding of the key justice-based considerations to be considered when reflecting on where injustices take place and how we should attempt to solve them. We argue that each of the scholarships have developed multiple foci which need to be united in the face of the impending urgent transition. We also identified restorative justice as a particularly important dimension to be expanded further as procedural justice can sometimes not go far enough in ensuring that perpetrators are brought to justice and affected individuals find solace.

We call on justice researchers to explore the multiple implications of the transition to a post-carbon society through the application of this new triumvirate of tenets (distributional, procedural and restorative). The just transition framework enables researchers to more explicitly reflect upon the intersectionality of environment, climate and energy, assess justice issues from a truly interdisciplinary perspective and ultimately contribute to meaningful long-term solutions.
